EDUCATION

Doctor of Philosophy in Informatics (Bioinformatics track)
Doctor of Philosophy in Ecology, Evolution, and Behavior August 2013-Present
Indiana University
Bloomington, IN

Master of Science in Bioinformatics May, 2013
Indiana University, School of Informatics and Computing
Bloomington, IN

Bachelor of Science in Biology May, 2010
Purdue University, School of Science
West Lafayette, IN

PUBLICATIONS

PRESENTATIONS

The evolution of the genes and genomes of 76 arthropod species

Gregg Thomas, Matthew Hahn, Stephen Richards

Evolution Meeting, Regular talk

Portland, OR

June 26, 2017

The evolution of the genes and genomes of 76 arthropod species

Gregg Thomas, Matthew Hahn, Stephen Richards

Arthropod Genomics Symposium, Invited talk

South Bend, IN

June 9, 2017

Gene-tree reconciliation with MUL-trees for polyploidy analysis

Gregg Thomas, S. Hussain Ather, Matthew Hahn

Evolution Meeting, Regular talk

Austin, TX

June 19, 2016

Accounting for Sequencing Error in Phylogenetics

Gregg Thomas

Society of Systematic Biologists, Lightning talk

Ann Arbor, Michigan

May 21, 2015

Inferring Molecular Convergence from Genomic Data

Gregg Thomas, Matthew Hahn

Midwest Ecology and Evolution Conference, Contributed talk

Indiana University, Bloomington, Indiana

March 28, 2015

Convergent Evolution of the Genomes of Marine Mammals

Gregg Thomas, Andrew Foote, Marine Mammal Genome Consortium, Matthew Hahn

EMPLOYMENT HISTORY

Research Assistant

Hahn Lab, Ecology, Evolution, and Behavior Department
Indiana University, Bloomington, IN

January 2012 – present

- Wrote a program (cafererror) which estimates assembly and annotation error in genome assemblies using CAFE 3
- Performed gene family analysis in several genome projects, including cats, mosquitoes, various primates, fish, and birds of paradise
- Collaborated with scientists from other institutions on a project to discover the amount of molecular convergence in the phenotypically convergent marine mammals
- Studied the effects of null model choice and sample size on inferences of convergent evolution
- Established a novel model of mutation rate evolution in mammals given recent observations from whole genome sequencing of human families
- Developed a method and accompanying software package (GRAMPA) to correctly infer the placement and mode of polyploidy events on a phylogeny
- Led part of the Insect 5000 genomes pilot project (i5k) tasked with performing comparative analysis on 27 newly sequenced insect genomes along with 49 previously sequenced ones, including inferring a large species phylogeny for insects and the largest gene family analysis to date

Associate Instructor

Information Infrastructure II (I211), School of Informatics and Computing
Indiana University, Bloomington, IN

August 2015 – May 2016

- Led and organized a lab to teach students advanced programming skills using the Python language
- Assigned as lead Associate Instructor in a large lecture class tasked with helping students code in group activities and monitoring their progress, attendance, and absences
- Guided the other Associate Instructors in their duties in the class
- Advanced the students beyond the syntax learning of basic programming and into advanced topics such as algorithms, regular expressions, interacting with the Web (HTML and CGI), and databases (SQL)

Associate Instructor

SNP Discovery and Population Genetics (I590), School of Informatics and Computing
Indiana University, Bloomington, IN

August 2014 – December 2014

- Led a lecture to teach graduate students basic programming skills using the Python language
- Met with students weekly to aid in completion of their programming assignments

- Helped students integrate population genetics methods and programming skills to write programs to perform specific tasks, such as calculating nucleotide diversity, detecting positive selection, calculating linkage disequilibrium, and quality filtering

Associate Instructor

Information Representation (I308), School of Informatics and Computing

Indiana University, Bloomington, IN

August 2011 – May

2012

- Taught students about binary representation and operations and basic database skills in a lab environment
- Interacted and aided students with their assignments and projects on a one-on-one basis
- Assisted the professor with creating and grading assignments, projects, and tests

ACTIVITIES

Undergraduate Mentor

Indiana University, Bloomington, IN

August 2015 – present

- Taught basic programming, research, and scholarship skills to two undergraduate students
- Assigned tasks relevant to current ongoing projects in the lab to the students
- Met weekly with the students to discuss the projects and read research papers

Jim Holland Summer Science Research Program Mentor

Indiana University, Bloomington, IN

July 2014

- Mentored and taught a student in a program designed to introduce underrepresented minority high school students to scientific research
- Designed a project to assess divergence time estimates within the scope of the one week program and the capabilities of my student
- Helped my student design and present her work during the program's poster session

Graduate Student Advisor

Indiana University Bioinformatics Club

Indiana University, Bloomington, IN

January 2012 – 2014

- Served as a founding member of the club and its first treasurer
- Kept track of funds and purchases through the club's Student Organization Account
- Facilitated club elections of officers
- Organized bi-weekly club meetings where current events in bioinformatics are discussed
- Guided the officers and members in planning club activities

AWARDS

Genetics, Cellular, and Molecular Sciences Training Grant

SOFTWARE

GRAMPA: Gene-tree Reconciliation Algorithm with MUL-trees for Polyploid Analysis

<https://gwct.github.io/grampa.html>

- Given a singly-labeled species topology and a set of corresponding gene-trees, this software can infer if any whole genome duplications have occurred and, if so, infer the mode of polyploidization and the placement on the phylogeny

i5k Phylogenomics Website

<https://cgi.soic.indiana.edu/~grthomas/i5k-web/main.html>

- Given the vast amount of data involved in the i5k pilot project, I developed this website to organize and share the data and results with colleagues

GWCT: Genome-Wide Convergence Tester

<https://github.com/gwct/gwct>

- Software written to count convergent, divergent, and unique substitutions in amino acid data

cafererror

<https://hahnlab.github.io/CAFE/>

- Part of CAFEv3.1, I wrote this program to utilize CAFE's new error correction function to estimate (via pseudo-maximum likelihood) genome assembly and annotation error
